Eurosoft S.A was one of the first companies to utilize the new technology **ORACLE 10G Application Server**
as well as
Database 10G.

The **Oracle Database 10g** is designed to provide easy-to-use, low-cost solutions to companies by introducing innovative ways to handle and distribute the data.

This new technology lowers managerial costs because it is uniquely designed to offer automated processes and simpler methods of obtaining information as well as performance diagnostics and installation procedures.

The **10g Server** is an integral platform that allows small and big companies to be more versatile and respond instantaneously to the market changes. It also provides all the intermediate services that are required in order to proper operate and administrate the internet applications (**Web Services**).
